Backup and Continuity Services

You need to know that you can recover securely and rapidly when disaster strikes. To do so, you need to have a backup and continuity plan in place that is well designed, fully tested and continually reviewed to ensure it remains fit for purpose.

As a business that is reliant on technology, you recognise the risk posed should the worst happen. It is therefore critical that you have effective backups in multiple locations and a robust business continuity plan in place for the long-term well-being of your business.

There are a multitude of things that can go wrong that you would need to recover from. Those include everything from viruses and security breaches to data corruption, power outages and employee sabotage.

Each of these would affect your business-critical applications and data negatively. You need to ask yourself the following questions:

- Are you prepared for when disaster strikes?
- Do you know how long it would take you to recover?
- Have you recognised how costly downtime could be to you, both financially and to your brand?
- What would happen to your business if you lost all of your data?

Backup and Continuity Service **Benefits**

Multiple, secure storage and recovery options.

Our backup and business continuity services include local or off-site file backup solutions, as well as cloud-based disaster recovery options. The solution chosen will depend on your business needs, but each allows for fast and complete recovery, which ensures minimal disruption to your business in the event of disaster.

Expert advice based on our extensive experience backing up similar businesses to yours.

We can help you understand what data and applications are most critical to you and together we can determine which will cause the most monetary loss if disaster strikes. We can then work with you to produce a bespoke backup and continuity plan that minimises your costs, while limiting your risks.

Offsite replication of your mission-critical data with a variety of recovery options.

Get access to secure offsite systems and storage, with options that include the use of cold standby equipment to hot, instantly available recovery options.

Regular testing and updating of your backup and business continuity plans.

Testing your backups and recovery plans can unlock a number of issues. It is therefore vital that they are tested regularly to ensure they remain fit for purpose, but it is often hard and disruptive to do that in-house. It is also critical that your systems are kept up to date, with any changes to your business requirements or technology environment being documented and incorporated into your plans.

Flexible service scales easily with your evolving requirements.

There is nothing worse than maxing out your current infrastructure and having to compromise to make things work. You can avoid that pain and rest easy knowing that as your backup and business continuity needs change, you can scale and adapt as needed to meet those changing needs.

Optimised operational efficiency with rescued costs.

Maintaining your own backup and business continuity infrastructure can be incredibly resource-intensive and costly. By engaging with a trusted IT Partner, you can avoid the hassle and costs while ensuring that you are covered at all times.
