Outsourced Data Backups

Managing backups and getting access to the best backup infrastructure is time-consuming and expensive. We can remove that burden and reduce your risk of data loss.

Every business needs to back up their critical business data in three places, on at least two different media types, with one place being in a geographically different place, such as in the cloud or in a data centre.

We have the tools, resources and expertise needed to provide you with a robust and secure outsourced data backup service that is designed to reduce your risk.

It is vital that your mission-critical data is kept safe and secure and it is imperative that it is recoverable should the worst happen. By outsourcing your data backup needs, you transfer the responsibility to a team of backup experts whose dedicated role it is to make sure that your backups are successful and that your data is safe, be that on-premise, in a data centre or backed up to the cloud.

You keep control and have full oversight, deciding how your data is stored, where it is replicated, which devices you would like protected, the frequency of your backups and the length of time you would like to have your backups available for.

Outsourced Data Backup **Benefits**

You can improve your operations.

You can focus your internal resources on other tasks by outsourcing your data backups to a trusted IT Services provider. Carrying out successful backups can take time, especially when things go wrong. By outsourcing, you will no longer have your team bogged down with backup issues and that will improve your ability to deliver.

You can set your own Recovery Time Objectives (RTOs) and Recovery Point Objectives (RPOs).

You will have the level of control that you would have if you backed up your applications and data in-house. That gives you the ability to set your own recovery time and recovery point objectives as per your business priorities and data protection compliance needs.

Peace of mind knowing that your mission-critical applications and data are protected.

Should the worst happen, such as a cyber security attack, you need to know that you are in a position where you can easily restore your mission-critical applications and data from a reliable backup. By outsourcing your backups, you can be confident that you can recover when needed.

Access to highly secure and reliable outsourced backup services.

Your can rest easy knowing that your backups are validated, fully encrypted and always performing within acceptable tolerances. You also get recovery and restore assurance as standard, backed by an agreed service level agreement (SLA).

Outsource your data backups to a trusted **technology service provider**.

We will monitor, support and manage your backups 24x7x365.

Discuss your Outsourced Data Backup needs by calling us on **+44 203 034 2244** or **+1 323 984 8908,** or emailing **hello@cardonet.com**

Our Technology Partners

cardonet

Outsourced Data Backup **Features**
